

# FORD RADIO MODEL NUMBER RETRIEVAL INSTRUCTION

Many of the Ford aftermarket products we offer include or exclude a select number of radios, and if you are required to retrieve the radio's model number; following these steps will help without having to remove the radio from the dash. These instructions are specific to Ford style radios pictured below with the "AUX" button on faceplate.

FORD CAN-BUS RADIO

1. Press and hold pre-set button **3** and **6** for 2 seconds (speaker walk around test is initiated)
2. Before test is completed, press pre-set button **6**
3. Press Tune Up arrow until radio model number is displayed
4. Record this number usually in this format: xxxx-xxxxxx-xx (e.g., 5G1T-18C815-EB)
5. Exit by tuning radio OFF

## Warning:

The radio face of many Ford vehicles may appear the same; however, they are internal differences even if installed in the same mode/year vehicle (very confusing). If a vehicle listing has a footnote (e.g., Ford Five Hundred, Mercury Montego), please follow aforementioned procedure which is the most reliable method for determining radio model and compatibility with our offering.
