

Ford Radio Model Number Retrieval Instructions

Many of the Ford aftermarket products we sell include or exclude a select number of radios, and if you are required to retrieve the radio's model number; following these steps will help without having to remove the radio from the dash. These instructions are specific to Ford style Radios pictured below with the "AUX" button on faceplate.

1. Press and Hold button 3 and 6 for 2 seconds (speaker walk around test is initiated)
2. Before test is completed, press button 6
3. Press the Tune Up arrow until Radio model number is displayed
4. Record this number (usually in this format: xxxx-xxxxxx-xx)
5. To exit turn radio OFF

Important:

The radio face may appear the same; however they are different radios in vehicles of the same model and year which is very confusing. The aforementioned procedure is the most reliable way to determine compatibility of your radio with our parts.
